Notes:

1. All values rounded to two significant figures
2. Costs based on May 2007 (ENR index of 7942)
3. Total I/I includes I/I estimates for both sewers and lateral connections from the property.
4. Flows from these properties are currently being served by "cluster" systems and therefore are included with other existing sewered facilities.
5. No I/I estimated for infilling as the estimates for I/I are included with the existing collection system flows.
6. Bailey's Path has no estimated I/I because it is a pressure sewer system where I/I is expected to be minimal based on the type of technology.
